## Revue 1991

this book constitutes the proceedings of the 5th european software engineering conference esec 95 held in  
sitges near barcelona spain in september 1995 the esec conferences are the premier european platform for the  
discussion of academic research and industrial use of software engineering technology the 29 revised full papers  
were carefully selected from more than 150 submissions and address all current aspects of relevance among the  
topics covered are business process re engineering real time software metrics concurrency version and  
configuration management formal methods design process program analysis software quality and object oriented

this book focuses on how the boxes methodology which is based on the work of donald michie is applied to ill defined real time control systems with minimal a priori knowledge of the system the method is applied to a variety of systems including the familiar pole and cart this second edition includes a new section that covers some further observations and thoughts problems and evolutionary extensions that the reader will find useful in their own implementation of the method this second edition includes a new section on how to handle jittering about a system boundary which in turn causes replicated run times to become part of the learning mechanism it also addresses the aging of data values using a forgetfulness factor that causes wrong values of merit to be calculated another question that is addressed is should a boxes cell ever be considered fully trained and if so excluded from further dynamic updates finally it expands on how system boundaries may be shifted using data from many runs using an evolutionary paradigm
